

PR 1: Stable filtering on Logs

We get reports that filters on the Logs page are broken. Please fix this issue with testing.

Identify the underlying issue, which caused this to happen - and add a test/fix for that.

PR 2: Stable team creation

When adding models in the create team modal, the models get reset. Please fix this issue with testing.

Identify the underlying issue, which caused this to happen - and add a test/fix for that.

PR 3: Consistent Delete operations

When deleting a callback on the UI, it does not work. This is the 2nd time, a user has reported a 'delete' action on the UI not working (similar issue was reported for deleting passthrough endpoints on the UI).

Please fix this issue, and identify if there are other places on the UI, where DELETE actions do not work as expected. If so, suggest a long term fix for this.

PR 4: Consistent Add/remove on edit

Cache check pointing for anthropic models. User would add an anthropic model via Add Model.

User would go to Edit Model, and add 'cache point' to the model, and save the change.

The screenshot shows a web interface for configuring 'Cache Control Injection Points'. At the top, there's a dropdown menu with the text 'Select existing guardrails or type to create new ones'. Below this, a toggle switch is turned on. A text box explains: 'Providers like Anthropic, Bedrock API require users to specify where to inject cache control checkpoints, litellm can automatically add them for you as a cost saving feature.' There are three columns: 'Type' with a dropdown showing 'Message', 'Role' with a dropdown showing 'Select a role', and 'Index' with a dropdown showing 'Optional' and '+' and '-' buttons. At the bottom, there's a button that says '+ Add Injection Point'.

User would then go back and try to remove the cache control injection points, and this was not being removed.

Similarly, the admin would try to set a limit on a user, but when they tried to remove the limit, it was not removed.

The screenshot shows a 'User Settings' page for a user named 'krrish+demo2025@berri.ai'. The page has a 'Back to Users' link at the top left. On the top right, there are buttons for 'Reset Password' and 'Delete User'. The user's ID is '9b171b77-8d0e-4c1e-b88e-68100e9ebf5a'. The 'Global Proxy Role' is set to 'Internal User (Create/Delete/View)'. The 'Personal Models' section shows 'No Default Models'. The 'Max Budget (USD)' is set to '10.00'. The 'Reset Budget' is set to 'weekly'. The 'Metadata' section is empty. At the bottom right, there are 'Cancel' and 'Save Changes' buttons.
